	1	2	3	→X
1	1,1	2,1	3,1	
2	1,2	2,2	3,2	
3	1,3	2,3	3,3

...and so on.

The “EDGE” settings are for fine calibration of a video wall. This setting is to eliminate any black edges that you may have. In most cases you should not need to use this function.

- “LEFT EDGE” stretches the overall display horizontally from the left hand side.
- “UP EDGE” stretches the overall display vertically from above.
- “RIGHT EDGE” stretches the overall display horizontally from the right hand side.
- “DOWN EDGE” stretches the overall display horizontally from below.

2. FAQ and Troubleshooting

2.1 How do I create content for my video wall?

If the output size for your digital signage media player is 1920x1080 pixels (16:9 ratio), and you have a video wall configuration that has another aspect ratio you must squash your video content to fit the 16:9 ratio.

The following example is for a 1x3 video wall configuration.

The overall aspect ratio for this video wall is 16:27 (1920x3240 pixels), however the media player can still only output a 16:9 (1920x1080) video.

Step 1 of 3. First create your content based on the overall aspect ratio (16:27).

Step 2 of 3. Now you must resize the video so it has an aspect ratio of 16:9, i.e. resize the long side of 3240 pixels to 1080 pixels. The video that you send to the media player must be 1920x1080 pixels.

Step 3 of 3. This video can now be processed by the media player and when sent to a 1x3 configuration video wall will look like this.
