

OW55UHD10 Wall-Mount Installation Manual

- Outdoor Wall-Mount Installation Method: This installation uses expansion screws for secure fixation.

Required Installation Parts			
1.Mounting Bracket × 1		5.M12 Eye Bolts × 2	
2.Mounting Plates × 2		6.Keys × 2	
3.M6 × 14 Machine Screws × 2		7.M10 × 120 Expansion Screws × 6	
4.Quick Installation Manual × 1			

P.S. M6 x 14 indicates screw with diameter 6mm and depth of 14mm.
M10 x 120 indicates screw with diameter 10mm and depth of 120mm.

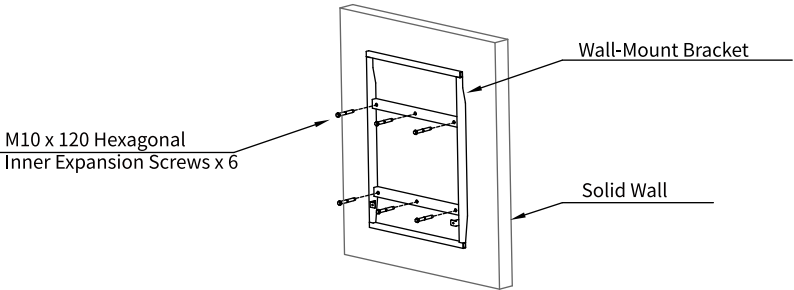

Safety Precautions

- Refer to the actual items received for installation diagrams and parts.
- The installation steps provided are for reference only.
- Ensure all screws are securely tightened during installation.
- The device must be installed within the specified weight and dimension limits.
- The installation surface must be flat and stable.
- Ensure the installation is completely vertical. For wooden walls, the wall thickness must be at least 10 cm, with a load-bearing capacity of over 220 kg.
- If the installation environment changes, consult the manufacturer's installation team for technical support.

Installation Steps

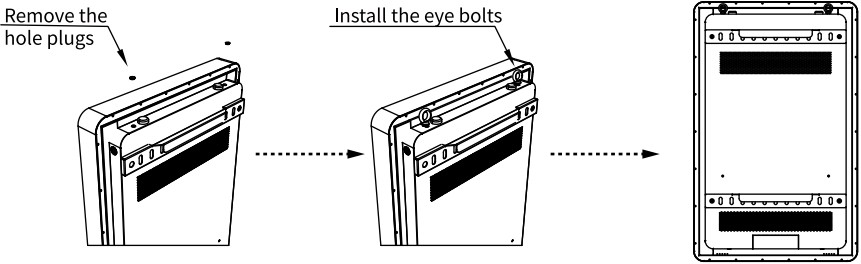

Step 1 Install the Wall-Mount Bracket

Secure the wall-mount bracket to the wall using six M10 × 120 hexagonal inner expansion screws. Ensure it is mounted horizontally on a solid wall.

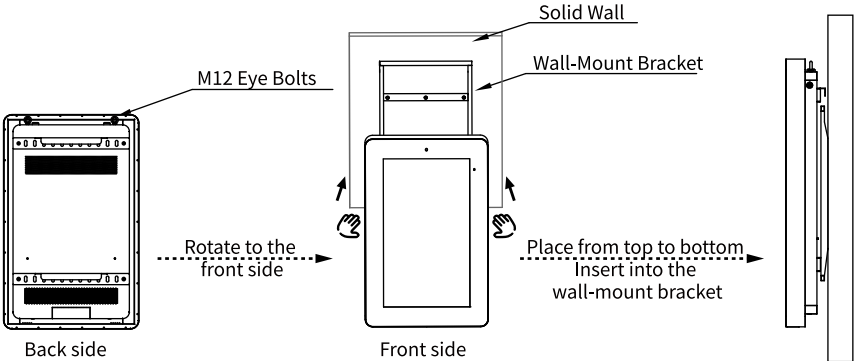

Step 2 Install the Eye Bolts

Remove the pre-installed hole plugs from the top of the display. Insert and secure two M12 eye bolts into the designated holes. The display is now ready for mounting.

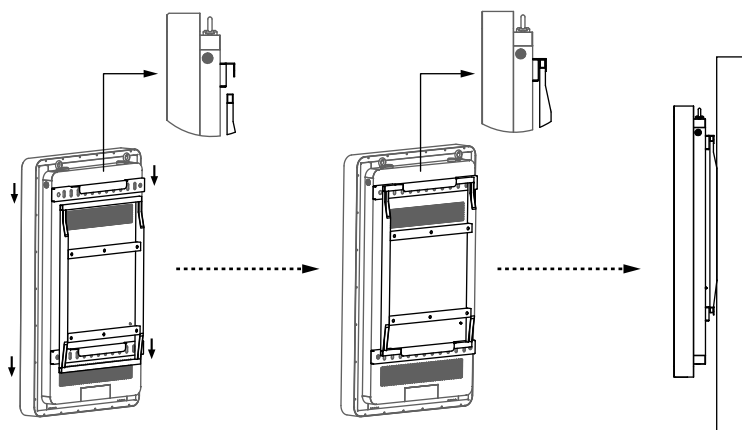

Step 3 Mount the Display

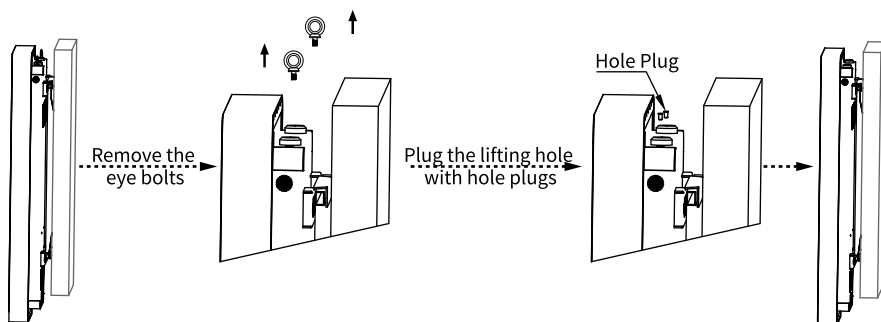

Use the M12 eye bolts to lift the display, supporting both sides. Align and insert the top and bottom mounting plates into the wall-mount bracket.

Make sure both the upper and lower wall-mounted panels are securely locked in place.

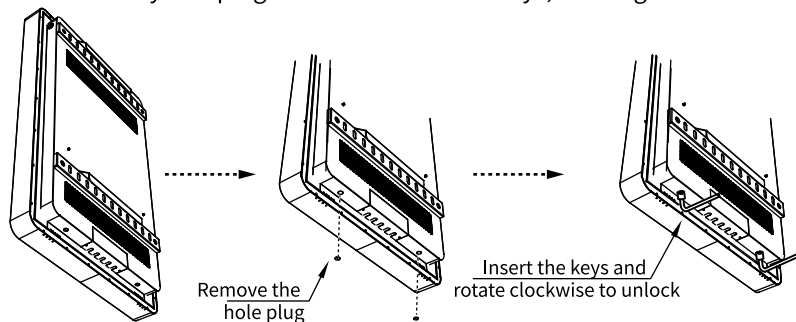

Once the mounting plates are fully inserted, remove the eye bolts and reinsert the hole plugs.

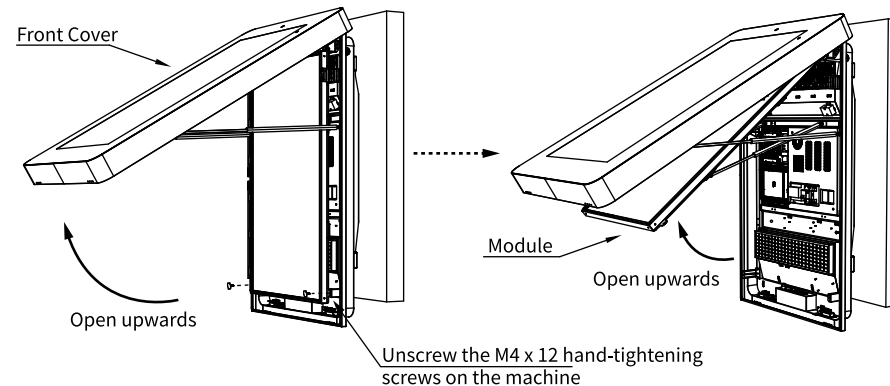

Step 4 Install the Anti-Theft Screws

Remove the bottom keyhole plug. Insert the two bent keys, rotating clockwise to unlock.

Open the front cover upwards and unscrew the M4 × 12 hand-tightening screws on the module. Lift the module upwards.

Align the rear cover hole with the anti-theft screw hole in the wall-mount bracket. Secure the display using two M6 × 14 pan-head screws to lock it in place. Close the module and tighten the M4 × 12 hand-tightening screws. Close the front cover to complete the installation.
