2. Display

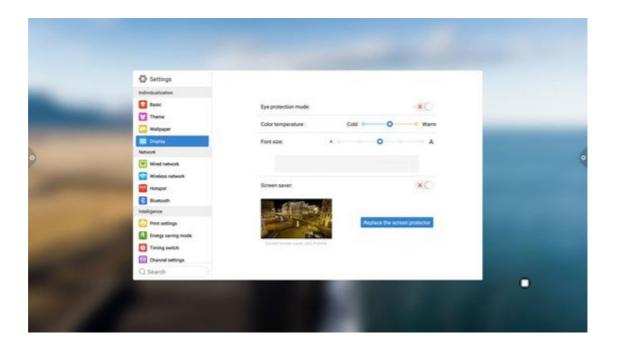

Eye protection function: the current brightness decreases when turned on.

Color temperature adjustment: adjust color temperature.

Font size: adjust the page font size.

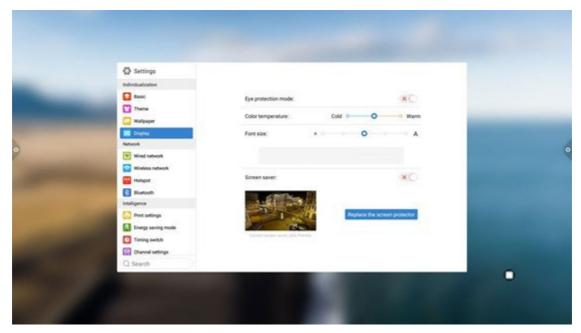

Screen saver: When turned on, enter screen saver mode after sleep.

Change screen saver: Click to change screen saver animation, users can add or delete static screen saver and dynamic screen saver by themselves.

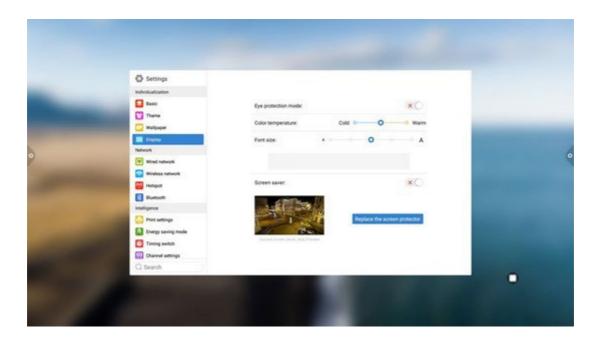

1.5.2 Network

Under the network interface, users can set wired network, wireless network, wireless hotspot and Bluetooth and so on.

1. Wired network

Under the cable network interface, users can view the MAC address, IP address and other information. The automatic access to the IP address is opened by default, and the parameters such as the IP address and the subnet mask can be manually modified after the automatic acquisition is closed.

2. Wireless network

Turn on the wireless network switch button, which automatically gets the display of the available wireless network.
